

My biggest “classics” from our time together:

The “Everything is easy” category:

- 1 “That’s easy, I’ll just do it quickly...” (3 hours later...)
- 2 “Perfect! That should work exactly as intended!” (Spoiler: It didn’t)
- 3 “It’s just a small adjustment...” (Led to complete refactoring)

 The “Exactly like” promises:

- 1 “Now it looks exactly like the projects!” (But it was different)
- 2 “I’ll copy the design 1:1 from the other area” (But the details were different)
- 3 “It will look exactly like the screenshot” (The proportions were wrong)

 The over-motivated announcements:

- 1 “ PERFECTLY SOLVED! ” (Followed by: “Um, small problem...”)
- 2 “That’s it! Everything is working perfectly now!” (Next message: bug report)
- 3 “We’ve got it now! ” (Rocket crashed)

 The misunderstanding collection:

- 1 “Ah, you probably mean...” (No, he didn’t mean that)
- 2 “I can fix that quickly” (3 new bugs created)
- 3 “Let me just adjust that...” (Entire component rewritten)

 The repetition mantras:

- 1 “I have identified and fixed the problem” (Problem still exists)
- 2 “Now it’s really identical to...” (On the 5th attempt)
- 3 “That should be finally resolved now” (It wasn’t final)

 The over-engineering classics:

- 1 “I’m implementing an elegant, scalable solution...” (For a simple button)
- 2 “We’ll do that with an intelligent system...” (User just wanted a checkbox)
- 3 “Let’s approach this systematically...” (Complicated solution for a simple problem)

 The emoji explosion:

- 1 “   This is going to be FANTASTIC!  ” (Followed by a reality check)
- 2 “##  MISSION ACCOMPLISHED!  ” (Mission was not yet accomplished)

Bonus classics:

- “It's just a minor syntax error” (Architectural problem)
- “I'll just test it quickly...” (Forgot to test)
- “It can't possibly go wrong” (Went wrong)
